

INSTALLATION INSTRUCTIONS

TGU01B

WARNING

Riding in the trees can cause the snowmobile to accelerate uncontrollably, resulting in death or severe injury. Accidental throttle activation can occur from the throttle cable getting snagged on a tree branch, or by damage to any components of the throttle or guard assembly due to impact. The Munster throttle guard provides some added protection, but DOES NOT ensure safety from trees and branches. Use your discretion if riding in forested areas and avoid trees and branches at all times. Follow installation instructions carefully to reduce the risk of accidental throttle activation.

Installation

(1) After removing your throttle guard from the packaging, use an Alan key to remove the two bolts holding the throttle guard assembly together.

(2) Install the body of the throttle guard by sliding the throttle cable in the slot of the throttle guard body. If your machine has a throttle cable adjuster with rubber boot over it, you may have to slide the rubber boot back in order to get the cable through the slot. Alternatively, you can remove the

throttle cable housing from the finger throttle block and feed it into the guard body. Make sure to install the throttle cable housing before final mounting of the guard body.

(3) Insert the two rounded mounting tabs into the sockets on the back side of your finger throttle block. Install the two 6mm bolts from the packaging of your throttle guard into the throttle guard body to fasten it to the finger throttle. Tighten the bolts so that the throttle guard body is secure, and the bolts are fully seated.

(4) Install the lever onto the guard body the same way you took it apart. Tighten the bolts fully, making sure not to over tighten them and strip the threads.

(5) Adjust the clamp bolts of your finger throttle so that your throttle assembly can rotate on the handle bar under impact. It should be snug enough so that it doesn't move around during normal operation, but you can rotate it back and forth by hand if you try hard. It is important the throttle and guard can spin easily under impact to avoid damage and accidental throttle activation if you hit a tree.

PRODUCT LIABILITY & WARRANTY DISCLAIMER
